

# PS Plate Developer

The PS developer is used for mass brand of positive PS plates, by working with an automatic plate processor.

HC PS plate developer have good compatibility, powerful and durable, full dot, leaving the film is high, no precipitation and crystallization. The PS plate developer is featured by wide compatibility and long lifetime, which can process the major brand plates well in one single liquid and reduce the cost of frequently changing the developer due to its short life time and limited compatibility.

What's more, HC PS plate developer is designed with a gentle formula, therefore it has the ability to protect the image areas and sharpness to hold the long running time on the presses procedure.

## Technical Specifications of PS Plate Developer

Density: 1,070 g/cm<sup>3</sup>
